Characteristics and Functions

Average Tensile Strength
Tensile strength has been enhanced above 2,300 kgf.

Heavy Duty Chain
All material and heat treatment are carefully calibrated to maximize the tensile strength and stretch resistance to reach its superior overall performance.

Fine Blanking Sprocket
The pressing technique invents high dimensional accuracy and smooth surface.

Cr-Mo Alloy Steel
High wear-resistance property with Cr-Mo Alloy steel.

Unique IHP Treatment
With unique IHP (induction harden process) treatment on the tooth, the sprocket life has been enlarged at the most.

Hi-carbon
High quality material S45C steel.
